# JORENKU Biotin

**Biotin and zinc contribute to strengthening bad hoofs as well as giving the horse a nice shiny fur.**

Biotin for horses is allocated to address painful, bursting, and soft hoofs, which hinders horseshoes from being fitted.

Furthermore, Biotin for horses can be used when there are clinical symptoms of soft hoofs. A reconstruction period will typically last 3-6 months.

The effect is supported by the biotin's content of essential proteins and micro minerals.

The daily dosage is divided into 2 portions and mixed with the compound feed, oat and mash.

Biotin is available in buckets with 4 kg.  
Measuring jug is included.

# JORENKU Biotin

## Biotin Mineral supplementary feed

- Prevents bad hoofs
- Treatment of soft hoofs
