JORENKU Hand-Des

Hand-Des is a liquid long-acting disinfectant with a broad-spectrum effect against all harmful bacteria incl. MRSA. Therefore, Hand-Des is suitable as hand disinfection.

Hand-Des works by "encasing" the microorganisms, penetrate, destroy the outer membrane and bind itself to the cell wall, so the microorganisms smother and die.

Hand-Des works on both bacterial cells, fungal cells, enveloped viruses, and spores. Therefore, Hand-Des has a very broad-spectrum effect against nearly all microorganisms - also against MRSA-bacteria.

Hand-Des differs from traditional disinfectants based on alcohol by not vaporising, which makes the effect of Hand-Des prolonged. In addition, Hand-Des also works on bacteria, such as Escherichia coli, that have become resistant to traditional disinfectants.

Hand-Des is not allergenic, nor does it harm the skin, and therefore it is completely non-toxic towards humans and animals.

Hand-Des is pumped out as foam that is easily spread in the hands. As opposed to alcohol-based disinfectants, Hand-Des does not dry out the hands, and therefore it can be used for a long time.

Hand-Des is available in bottles with 100 ml and 250 ml.

JORENKU Hand-Des

Hand-Des A different disinfectant

- Effective and long-acting
- Kills all bacteria, fungi, and viruses
- Does not dry out the hands
- Water-soluble
- Easy to use
- Tested against hospital related viruses

Content
