

# JORENKU Oxi-Liq

# JORENKU Oxi-Liq

**Oxi-Liq is an acidic oxidising disinfectant used for disinfection of surfaces and equipment in agriculture.**

Oxi-Liq is suitable for almost all disinfection tasks in the stable, because it can be used as disinfection of water systems, boots etc.

Oxi-Liq works fast and efficient even at low temperatures and it does not require ventilation before placing the animals.

Oxi-Liq oxidises and is based on the active substances hydrogen peroxide and acetic acid. This combination gives a low risk of resistance and subsequently the product disintegrates into water, oxygen, and acetic acid and therefore it does not accumulate in the surroundings.

Oxi-Liq is available in cans with 22 kg, drums with 200 kg and IBC containers with 1,000 kg.

If you want an alkaline detergent instead, it is recommended to use Alka-Liq.

## Oxi-Liq

### Acidic oxidising disinfectant

- Works fast
- Effective at low temperatures
- Low risk of resistance

Composition
Hydrogen peroxide
Acetic acid
Peracetic acid

Product	Oxi-Liq
Product type	Disinfection
Packaging	22 kg can 200 kg drum 1,000 kg IBC container
Dosage	0.02-3 %

**JORENKU Oxi-Liq**  
Disinfectant

**Composition:**

- Active ingredient: ...
- ...

**Application / Usage:**

- Use for disinfection of surfaces and equipment in agriculture...
- ...

**Storage:**

• Store in original container before filling the vehicle.

**Weight:**

• 20.0 kg
