

# JORENKU Fe. Min

**JORENKU Fe. Min**  
**Supplementary feed with iron for piglets**

**Composition:**

- Sodium chloride
- Dextrose

**Additives:**

- Iron(II) sulfate
- Sodium bromate
- Cholic acid
- Talc oxide
- Propionic acid
- Phosphoric acid
- Hydrogen peroxide
- Alumina

**Analytical trace elements:**

- Crocid protein
- Crocid fibre
- Crocid fat
- Crocid ash
- Sodium
- Iron
- Magnesium
- Water

**Use:**

- Use as iron supplement for suckling piglets
- Abstract immediately from birth and 3-4 weeks ahead

**Storage:**

- Store in well-dried original container, cool and protected from moisture
- Keep away from foodstuffs

**Caution:**

- Do not use after 24 months from production date
- Store safe in well-dried original container, cool and protected from moisture
- Important: Pipes/hoses are cleaned weekly with 3% Deterf® 80/20

**Net weight:** 225 kg

**Manufacturer:** Jorensku A/S, Teglværvej 11, DK-4733 Tappernøje, Denmark

# JORENKU Fe. Min

**Fe. Min is a liquid supplementary feed containing iron for piglets.**

To secure a sufficiently high level of hemoglobin and not develop anemia, piglets need iron, but studies show that they only cover part of their iron needs through the sow's milk. Therefore, it is necessary to assign them extra iron.

Fe. Min iron supplement (drinking-iron) is based on Ferrous lactate, which is a special easily absorbed iron source and therefore ensures piglets an iron supplement.

Fe. Min tastes good because of the citric acid. The sour taste increases the digestion of liquid, which ensures the welfare of the piglets and adds extra energy through the content of sugar in the electrolytic mixture.

The added organic acids in Fe. Min stabilise the intestine and are beneficial to the overall gastrointestinal health. Low pH in the drinking water via milk- and citric acid together with electrolytes, reduces indigestion resulting in a higher growth and increased weaning weight.

When using Fe. Min as a supplement, infection through cannula is excluded, which reduces the problems of joint and encephalitis. Free access to iron supplement supports the pig's own natural regulation of haemoglobin levels.

Fe. Min is allocated immediately from birth and 3-4 weeks ahead.

Fe. Min is available in cans with 30 kg and in drums with 120 kg and 225 kg.

# JORENKU Fe. Min

## Fe. Min

Liquid supplementary feed containing iron for piglets

- Enhances the uptake of liquid
- Supports the gastrointestinal health
- Results in higher growth
- Results in higher increased weaning weight
- Supports the regulation of hemoglobin levels

### Additives

Ferrous lactate
Sodium benzoate
Citric acid
Zinc oxide
Propionic acid
Potassium sorbate
Copper sulphate

Product	Fe. Min
Product type	Supplementary feed
Packaging	30 kg can 120 kg drum 225 kg drum
Intake per animal per day	25-30 ml per pig

**JORENKU Fe. Min**  
 Supplementary feed with iron for piglets

**Composition:**

- Sodium chloride
- Dextrose

**Additives:**

- Iron(II) lactate
- Sodium bromate
- Cholic acid
- Tartaric acid
- Hydroxyapatite
- Ascorbic acid

**Analytical trace elements:**

- Crude protein
- Crude fiber
- Crude fat
- Crude ash
- Sulfur
- Iron
- Manganese
- Zinc
- Copper
- Calcium
- Phosphorus
- Water

**Usage:**

- Use as iron supplement for suckling piglets.
- Abstract immediately from birth and 3-4 weeks ahead.

**Storage:**

- Store in a cool, dry place.
- Keep away from moisture.

**Caution:**

- Do not use in conjunction with other iron supplements.
