JORENKU Molasses

Liquid molasses is an energy sucrose that can be used to increase the feed ration's energy content as well as to bind dust and feed particles.

Molasses has a high content of digestible energy, and if mixed in the drinking water it can contribute to increase savour as well as neutralise taste differences in drinking water from different springs.

Pure or attenuated, molasses can also be poured over the feed and have an appetizing effect on animals that are tired of their feed. Used in moderation, it has a beneficial effect on the diet.

Molasses is good as flavouring agent and among horses it will e.g. help foals to eat "solid food" or help horses with reduced appetite because molasses works appetising.

Molasses is liquid and has a dark brown color. It is assigned together with oats and hay.

Molasses is available in cans with 15 kg and IBC containers with 1,200 kg.

JORENKU Molasses

Molasses

Liquid organic sugar feed

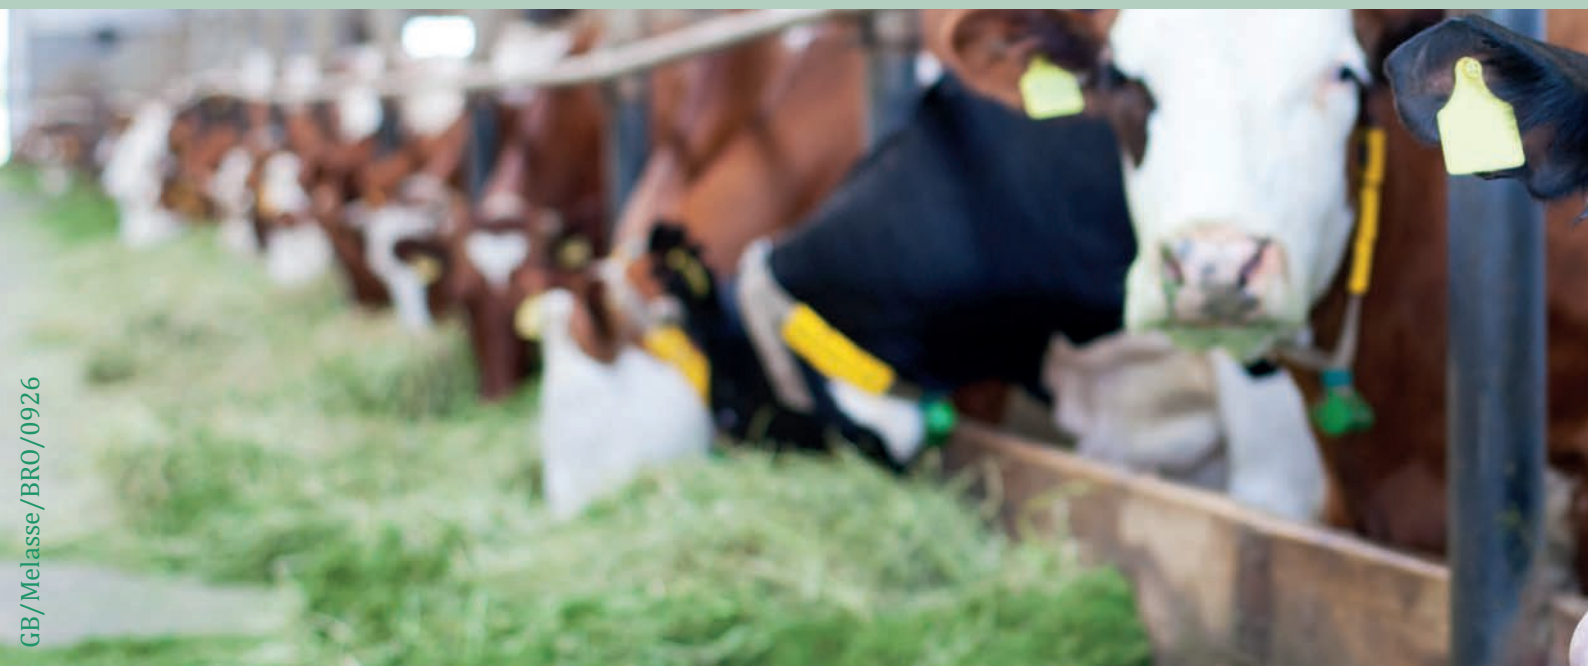

- Increases the feeds energy content
- Increases savour
- Neutralises taste differences in the drinking water
- Appetising
