

JORENKU Dan-Liq Cattle

Dan-Liq Cattle is a liquid supplementary feed for cattle.

Dan-Liq Cattle is a concentrated solution of electrolytes with the elements: orthophosphoric acid, magnesium, zinc, manganese, copper, and the trace elements: iodine, cobalt, and selenium. The composition is precisely adjusted to the needs of the cattle.

Dan-Liq Cattle stimulates the function of the cattle's rumen flora, as the microorganisms in the rumen need the trace elements for all essential functions for digestion of the feed.

Dan-Liq Cattle does not contain calcium to provide the right acid-base balance and enable a rapid absorption of the most important elements in the small intestine. Calcium is separately added to the feed.

Dan-Liq Cattle is available in cans with 10 kg and 25 kg.

JORENKU Dan-Liq Cattle

Dan-Liq Cattle

Liquid supplementary feed for cattle

Dosage

- Used in wet and dry feed for cattle with 50 – 60 g/day per cow

Additives
Orthophosphoric acid
