

JORENKU Triple-Iron Feed Trough

JOENKU Triple-Iron Feed Trough

Triple-Iron Feed Trough is specially made for allocating of iron supplement to piglets.

Piglets need iron to secure a sufficient high level of haemoglobin and not develop anemia. They only have some of their needs covered through the milk and thus it is necessary to assign them an iron supplement.

Triple-Iron is based on three-component iron and is composed so that it also acts as an electrolyte, providing a strong gastrointestinal system.

The Triple-Iron Feed Trough can be used as alternative to sprinkle Triple-Iron directly on the floor.

The Triple-Iron Feed Trough is undivided, so there is full access to the whole shell.

The trough is produced in the food approved material Polypropylene (PP) and also has a hygienic and smooth surface that makes it easy to clean.

For mounting on fixtures, a section, a bolt, and a palm grip hand knob are included.

Triple-Iron Feed Trough is sold individually.

JOENKU Triple-Iron Feed Trough
